ORDER ORGANIC FERTILISER

TOP TIPS

- ✓ Contact PDS to book in your renovation work for September
- ✓ Typical compound fertiliser blends for this time of the year would be ICL Sportsmaster Zero Phosphate 12-0-9 +Fe
- ✓ Typical compound fertiliser blends for this time of the year would be VerdiCulture PR 18-3.5-8 1Mg 0 +TE

WETTING AGENT BENEFITS

- Improves water penetration
- Improves water distribution
- Helps to prevent dry patch or helps to overcome dry patch

FERTILISER ADVICE

PDS are happy to consult on which type of Fertiliser blend is best for your needs as it is often dependent on weather and soil type.

LOOKING AHEAD TO AUGUST

As the season draws to a close keep an eye out for fungal disease – especially where covers have been used.

EXPERT ADVICE

As the season continues you may want to continue using wetting agents – regular applications of Angus AquaEasy will help to ensure an even turf quality as more moisture is contained in the soil.

Remember that heavier clay soils tend to shrink and dry out more quickly.
