BOOK AERATION

TOP TIPS

- ✔ Remember to collect any fallen leaves that will kill off vegetation as well as encourage worms
- ✔ Keep an eye on the development of any moss spores and use an approved moss killer should they develop
- ✔ Reduce the amount of nitrogen in your nutrition applications at this time of year and increase the potassium. We recommend Verdi-Culture 6-5-10 +11% Fe

EXPERT ADVICE

Try to remove morning dew during these months and as always, avoid working on the square if there is frost on the surface.

Aeration of the square and outfield remains important and moist soil conditions provide an optimum time to operate.

For more information on our Aeration services, please call us on 01386 462 425.

CHOOSING FUNGICIDE

Keep temperature in mind when choosing your fungicide at this time of year – if soil temperatures remain high a systematic fungicide is an option, but where temperatures are lower consider Medallion.

HARDENING TURF

Harden the turf with applications of iron before any cold nights to make it more resilient

LOOKING AHEAD

To plan your next year ahead, contact us so we can help you select the correct products and services for the year ahead.
