

# SEPTEMBER

## ORDER ANGUS BIOACTIVE SEAWEED

01	02	03	04	05	06	07
08	09	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31				

## TOP TIPS

- ✔ If you intend to use a Seaweed product like Angus BioActive Seaweed to boost soil flora, ensure it is after a fungicide application
- ✔ Consider carrying out any required ground works or drainage as close to the end of season as possible when the conditions can take the extra weight of heavy machinery
- ✔ Disc seeding increases germination rates- contact us about our Vredo Disc Seeder for outfield

## EXPERT ADVICE

As autumn arrives we begin post-season renovation to rectify the wear that will have taken place in the soil over the season and ensure a perfect playing surface for the following year.

We carry out scarification with Koro 1.2M Scarifier/Collector to remove thatch fibrous material. We follow this by seeding with BLEC Multi Seeder.

After applying the cricket loam we mat this to ensure even distribution.

## PREVENTION IS BETTER THAN CURE

when it comes to controlling disease during the advent of heavy morning dew, spray where possible using a fungicide with a systemic action.

## DECOMPACTION

Decompaction relieves compacted soil, giving root zones the space they need, improving aeration and helping alleviate surface drainage issues.

## VREDO DISC SEEDER

This seeder is equipped with a double disc system giving seed spacing in 3.5mm rows for fast and dense recovery.
